

40-Ton Topkit Tower Crane

This topkit tower crane is designed for heavy lifting operations on construction and engineering sites. With a maximum lifting capacity of 40 tons, it is capable of handling large and heavy materials, ensuring efficient load distribution and stability.

Product Overview

High-Capacity Topkit Tower Crane

The ST80/116-40t is a robust topkit tower crane engineered for demanding heavy lifting operations in major construction and engineering projects. It provides exceptional stability and extensive reach, making it an ideal choice for high-rise building construction and complex bridge infrastructure. Featuring an advanced control system and a modular design, this crane ensures both precision in load handling and ease of on-site assembly.

Operational Features

Key Operational Benefits

- Robust tower structure for heavy-duty applications
- Advanced control systems for high precision
- Modular design for efficient transport and site assembly
- Enhanced stability for high-rise and bridge construction
