

400-Foot Jack-Up Drilling Platform

This self-elevating mobile offshore drilling unit (MODU) is designed for operations in water depths up to 400 feet. The platform is suitable for drilling exploratory wells, production wells, and performing well intervention activities.

Overview

High-Capacity Jack-Up Drilling Platform

This 400-foot jack-up drilling platform is a robust self-elevating mobile offshore drilling unit engineered for challenging marine environments. With a substantial operating depth of 400 feet and an impressive drilling depth capacity of 30,000 feet, it provides a stable and reliable base for exploratory and production drilling operations. Designed for versatility, the platform integrates essential support systems, living quarters, and a helideck to ensure operational efficiency and crew safety.
