

400-Foot Jack-Up Drilling Platform

This mobile offshore drilling unit (MODU) is used for exploration and production activities. The platform is equipped with a drilling derrick, cranes, living quarters and a helipad.

Overview

High-Capacity Jack-Up Drilling Platform

This 400-foot jack-up drilling platform is a robust mobile offshore drilling unit designed for efficient exploration and production in shallow water environments. Delivered in 2008, it combines substantial structural dimensions with advanced drilling capabilities to support complex well operations. Its design ensures stability for deep-drilling tasks while maintaining operational flexibility for offshore projects.
