

40000 Nm3/h Air Separation Plant

This air separation plant has a capacity of 40000 Nm3/h. It separates atmospheric air into its primary components for use in metallurgical processes.

Overview

Industrial Air Separation Solution

This large-scale air separation plant is engineered to deliver a capacity of 40,000 Nm3/h, providing essential gas production capabilities for heavy industrial applications. Designed for reliability and high-volume output, the plant separates atmospheric air into its primary components, such as nitrogen, oxygen, and argon. The system includes a comprehensive package of technologies and equipment tailored for metallurgical processes and large-scale industrial gas requirements.

Technical Specifications

Capacity

40000 Nm3/h

Gas Output

Scope of Supply

- Technology package
- Processing equipment
- Distillation columns
- External steel structures

Contract Date

June 2008
