

40A 440VAC Changeover Switch

This changeover switch is rated for 40A and 440VAC. It allows for the safe and reliable transfer of power between different sources.

Product Overview

Reliable Power Transfer Solution

This manual changeover switch is designed for the safe and efficient transfer of power between different sources, such as a main utility grid and a backup generator. Built for durability and ease of installation, it is suitable for both residential and commercial electrical systems. The switch ensures circuit protection and reliable performance in power distribution applications.

Technical Specifications

Key Performance Metrics

40 A Rated Current	440 VAC Rated Voltage	50 Hz Frequency
------------------------------	---------------------------------	---------------------------

Maximum Current	63 A
Standard Operating Voltage	400 V

Compliance & Standards

Regulatory Compliance	IEC60947-3, EN 60947-3
-----------------------	------------------------

Installation & Design

Aoelec

The switch features a clear interface for manual transfer between power sources, housed in a durable enclosure.

Applications

- Residential electrical systems
- Commercial power distribution
- Manual source switching
- Circuit protection

Design Features

- Durable housing enclosure
- Clear power source indication
- Manual operation handle
- Multi-pole design

Terminal Connections

12-terminal labeled configuration (1-12) for easy wiring
