

4.0mm Analytical Instrument Component Set

This set includes 4.0mm components for analytical instruments. These parts can be used in measurement or detection systems, such as light emitting diodes (LEDs) or similar sensors.

Product Overview

Precision Analytical Components

This 4.0mm analytical instrument component set is designed for integration into experimental measurement and detection systems. Engineered for precision, these components are suitable for professional laboratory and research environments where consistent performance is critical. Their compact form factor ensures easy integration into existing analytical hardware setups.

Technical Specifications

Category

Experimental Component • Sensor Accessory

Component Size

4 mm

Primary Application

Analytical Instruments, Measurement Systems, Detection Systems
