Product Overview

The mobile concrete mixer truck in operation, showcasing its maneuverability and robust drum design.

Mobile Self-Loading Concrete Mixer

This mobile self-loading concrete mixer truck serves as an efficient, all-in-one construction solution, combining mixing, loading, and carrying capabilities. Its compact design is specifically engineered for maneuverability in limited spaces, making it ideal for urban construction, tunneling, airport, seaport, and high-speed rail projects. Built with high-strength steel and advanced mixing blade technology, it ensures reliable performance, consistent concrete quality, and faster operational speeds.

Technical Specifications

QUALITY CONTROL

Rigorous quality control processes ensure the precision and reliability of the mixing equipment.

PACKING

Professional packing and moisture protection ensure equipment arrives in optimal condition.

Model	QLFQ4.5
Rotary Drum Capacity	4.5 m3

Key Features

CUSTOMERS

Trusted by a global customer base across diverse construction environments.

Operational Advantages

- Compact design for limited site access
- High-strength steel plate for increased load capacity
- 16mn forging normalizing processing on drum and ring
- Varying pitch mixing blades for improved performance
- Simplified feeding device for faster operation

Suitable Applications	Urban Construction, Tunneling, Airport Construction, Seaport Projects, High-Speed Rail
