

45-Degree Pipe Elbow

This 45-degree elbow is a pipe fitting that redirects flow at a 45-degree angle. It is made from metal or plastic with smooth internal curves to reduce flow restriction.

Product Overview

High-Performance 45-Degree Elbow

This 45-degree elbow is a precision-engineered pipe fitting designed to efficiently change the direction of flow in piping systems by 45 degrees. Featuring smooth internal curves, it is specifically crafted to minimize flow restriction and pressure drop. Ideal for diverse industrial applications including plumbing, HVAC, and general piping infrastructure, this component ensures reliable connectivity for pipes of the same diameter.

Technical Specifications

Angle	45 degrees
Fitting Type	Elbow
Flow Characteristics	Smooth internal curves for reduced flow restriction

Applications

Suitable Industries	Plumbing, HVAC, Industrial Piping
