

450 BPH 5-Gallon Water Bottle Filling Line

The 450 BPH 5-gallon water filling line is a high-capacity automated system for filling and packaging large water bottles. It incorporates bottle washing, filling, capping, and labeling stages to ensure a hygienic and streamlined production process.

Product Overview

High-Efficiency Filling Line

This 450 BPH filling line is a high-capacity, automated system engineered for the efficient processing of 5-gallon water bottles. Constructed from durable stainless steel, the system integrates multiple production stages including washing, filling, capping, and labeling into a single streamlined workflow. Designed for large-scale bottling facilities, it ensures hygienic operation while minimizing labor costs.

Performance Metrics

Production Capacity

450 BPH

Bottles Per Hour

System Features

Integrated Process Stages

- Bottle Washing
- Filling
- Capping
- Labeling

Key Operational Features

Automated System, Precise Filling Mechanism, Adjustable Settings, Integrated Control System

Construction & Design

Material Composition

Stainless Steel
