

## 4.6kWp Residential Solar Power System

This residential solar power system has a 4.6kWp capacity. It is designed for grid-tied operation, providing clean and renewable energy.

### System Overview

#### Clean Energy for Residential Needs

This 4.6kWp residential solar power system provides a reliable solution for generating renewable energy and reducing electricity costs. Designed for grid-tied operation, the system utilizes high-efficiency solar modules to optimize energy output for domestic use. It is a proven installation that contributes to a more sustainable energy footprint for residential properties.

### Technical Specifications

#### System Size

**4.6 kWp**

System Capacity

Module Type	CS6P-230PX
Completion Date	June 2010

### Location Data

Installation Location	Suwanee, GA
