

48V Phantom Power Supply for Condenser Microphones

This phantom power supply unit provides 48V phantom power to condenser microphones. It is essential for microphones requiring external power, ensuring optimal performance and signal clarity.

Overview

Professional Phantom Power Solution

The 48V Phantom Power Supply Unit is a specialized device designed to provide reliable, clean power to condenser microphones that require external voltage to operate. This unit ensures optimal signal clarity and performance for your audio equipment, making it an essential tool for high-quality audio recording and broadcasting setups. Featuring a simple, user-friendly power switch, it integrates seamlessly into any studio or mobile recording environment.

Technical Specifications

Output Voltage

48 V

Phantom Power

Model

HT-48V2

Suitable Applications

Audio Recording, Broadcasting, Studio Setup, Live Sound

Features

Controls

- On/Off Power Switch
