

4G9 Engine Water Pump

This water pump is designed for the 4G9 engine and ensures efficient coolant circulation. It features a cast aluminum housing for durability and includes a toothed pulley for timing belt synchronization.

Product Overview

Engine Cooling Performance

This water pump is specifically engineered for the 4G9 engine platform, serving as a critical component for maintaining optimal thermal regulation. Featuring a robust cast aluminum housing, it offers excellent corrosion resistance and durability for long-term reliability. The integrated multi-vane impeller ensures efficient coolant circulation, while the precision-engineered toothed pulley facilitates seamless timing belt synchronization.

Technical Specifications

Housing Material	Cast Aluminum
Pulley Design	Toothed Pulley
Impeller Design	Multi-vane

Compatibility

Engine Compatibility	4G9 Engine
----------------------	------------

Key Features

Core Benefits

- Optimized coolant circulation
- Engine overheating prevention
- Corrosion-resistant construction
- Precise timing belt synchronization
