

4K HDMI Video Wall Controller and Player

This video wall controller and player supports 4K resolution and HDMI connectivity. It is designed for creating video walls with customizable display configurations.

Product Overview

Professional 4K Video Wall Solution

This versatile 4K video wall controller and integrated player allows for seamless image splicing across multiple displays. It supports a variety of display modes without the need for complex control software, offering a true plug-and-play experience. Designed for diverse applications such as advertising, hospitality, and educational environments, it delivers high-definition content from both external HDMI sources and internal media playback.
