

# 4SD2 Submersible Water Pump

Submersible pumps designed for efficient water extraction in agricultural and industrial applications. Constructed with durable materials for long-lasting reliability in demanding environments.

## Product Overview

### High-Performance Submersible Solution

The 4SD2 submersible pump is engineered for efficient water extraction in demanding agricultural and industrial environments. Featuring a robust motor and optimized hydraulic design, this pump delivers reliable flow and pressure for deep well applications, irrigation, and drainage systems. Its durable construction ensures long-term performance, making it a dependable choice for clean water handling and light abrasive fluid management.

## Technical Specifications

### Fluid Compatibility

- Clean water
- Light abrasive fluids

Model Series	4SD2
Pump Type	Submersible
Primary Applications	Agriculture, Industrial, Deep Well Pumping, Irrigation, Drainage

## Safety and Maintenance

### Installation Safety

Users must read all installation instructions carefully before operating the equipment. Ensure all safety protocols are followed during the setup process to prevent damage and ensure optimal operational life.
