

4SP2 Deep Well Submersible Pump

This submersible pump is designed for water extraction from boreholes and wells. The multi-stage impeller system provides high head and flow rates.

Product Overview

High-Efficiency Deep Well Solution

The 4SP2 is a robust stainless steel submersible deep well pump engineered for reliable water extraction from boreholes and wells. Featuring a multi-stage impeller system, it delivers high head and flow rates suitable for demanding agricultural, domestic, and industrial water supply needs. Its corrosion-resistant construction ensures durability and consistent performance over time.

Technical Specifications

Key Features

- Multi-stage impeller system
- Corrosion-resistant construction
- High head performance
- Easy installation design
