

# 5-1000MHz Radio and TV Broadcasting Splitter

This high-frequency splitter is designed for radio and television broadcasting applications. It supports a frequency range of 5-1000MHz and features multiple output ports for distributing signals.

## Overview

### High-Frequency Broadcasting Signal Distribution

This professional-grade splitter is engineered for high-frequency radio and television broadcasting applications. It supports a broad frequency range of 5-1000MHz, making it highly compatible with various broadcast signals including cable TV and satellite installations. Built with durable materials, this unit ensures reliable, long-term signal distribution across multiple output ports for complex setups.

## Technical Specifications

### Frequency Range

**5 MHz**

Min Frequency

**1000 MHz**

Max Frequency

### Build Quality

Durable Construction • High-Frequency Optimized

### Suitable Applications

Cable TV, Satellite Installations, Radio Broadcasting, Television Broadcasting
