Overview

Automated 5-Gallon Filling Solution

This advanced 5-gallon barreled drinking water filling line integrates bottle washing, filling, and sealing into a single, cohesive unit. By combining mechanical, electrical, and pneumatic technologies, the system automatically manages the entire production cycle including barrel feeding, sterilizing, filling, and capping. Designed for high efficiency and hygiene, it utilizes multi-stage liquid washing and bleaching processes to ensure aseptic product quality.

Performance

Available Capacity Types

100 BPH, 200 BPH, 300 BPH, 450 BPH, 600 BPH, 900 BPH, 1200 BPH

Technical Features

Automated Functions

- Barrel feeding
- Bottle washing and sterilizing
- Filling
- Capping
- Counting
- Product discharging

Sterilization Technology

Multi-stage liquid washing, bleaching, and cap spraying device

Construction

Construction Material

Stainless Steel

Integrated Technologies

Mechanical, Electrical, Pneumatic
