

50 kWp Solar Energy System

This solar energy system has a module type of NewEdge CS6P-PX. It has a system size of 50 kWp and was completed in August 2010.

System Overview

50 kWp Commercial Solar Energy System

This high-capacity 50 kWp solar energy system is designed for large-scale energy production, making it an ideal sustainable solution for commercial buildings. The system utilizes efficient module technology to maximize electricity generation and reduce environmental impact. Successfully commissioned in 2010, this installation demonstrates long-term performance and reliability in suburban commercial environments.
