

50mm Steel Bar Cutting Machine

This robust steel bar cutting machine is designed for construction and industrial applications. It features a high-strength cutting blade capable of processing steel bars up to 50mm in diameter.

Overview

High-Performance Steel Bar Cutting

The CNCQ50 is a robust, industrial-grade steel bar cutting machine designed for demanding construction and fabrication environments. Featuring a reliable clutch mechanism and a powerful 4kW motor, it delivers consistent, high-speed cutting performance. Its engineered design allows for the precise processing of both plain carbon steel and deformed steel bars, ensuring efficiency and durability on the job site.

Technical Specifications

Shock Cutting Frequency

28 times/min

Cuts per Minute

Plain Carbon Steel Capacity	50 mm
-----------------------------	-------

II-Grade Deformed Steel Capacity	42 mm
----------------------------------	-------

Power and Motor

Motor Power	4 kW
-------------	------

Operating Voltage	380 V
-------------------	-------

Motor Rotation Speed	2880 r/min
----------------------	------------

Dimensions and Weight

Total Weight	561 kg
--------------	--------

Dimensions (L x W x H)	1420 x 460 x 840 mm
------------------------	---------------------

Features

Key Features	Clutch System, High-Strength Blade, Compact Design, Industrial Grade
--------------	----------------------------------------------------------------------
