

50T Welding Turning Table

This 50T turning table is designed for welding applications. The heavy-duty rotary platform allows precise positioning of workpieces to support efficient, high-quality welding.

Product Overview

Industrial Welding Precision

The 50T Welding Turning Table is a high-capacity rotary platform engineered for demanding industrial welding environments. It provides precise positioning of heavy workpieces, significantly improving efficiency and weld quality. With its robust construction, this turning table ensures long-term stability and performance under substantial load requirements.

Technical Specifications

Load Capacity

50 T

Max Load

Application

Welding, Heavy Duty Industrial, Positioning

Key Features

Design Advantages

- Heavy-duty construction for superior load bearing
- Rotary design facilitates precise workpiece positioning
- Optimized for high-quality industrial welding processes
- Enhanced stability for complex fabrication tasks
