

52kV Cold Shrink Cable Joint

This 52kV cold shrink cable joint is designed for connecting high-voltage cables. It utilizes cold shrink technology and provides reliable insulation and sealing for long-term performance and protection against environmental factors.

Product Overview

High-Voltage Reliability

The 52kV Cold Shrink Straight Through Joint is engineered for secure, high-voltage cable connections. Utilizing advanced cold shrink technology, it eliminates the need for heat sources or specialized installation tools, significantly simplifying the assembly process. This solution provides superior insulation and environmental sealing, ensuring long-term performance and protection in demanding industrial environments.

Technical Specifications

Rated Voltage

52 kV

Voltage Rating

Installation Method

Cold Shrink (No heat required)

Application

Straight Through Joint

Features & Benefits

Key Advantages

- Tool-less installation
- No heat source required
- Reliable environmental sealing
- High-voltage insulation performance

Product Attributes

High Voltage, Cold Shrink, Weather Resistant
