

5G Communication Antenna for Enhanced Signal Reception

This 5G communication antenna is engineered for optimal signal reception and transmission. Its robust, weather-resistant enclosure is designed for outdoor use and enhanced 5G network coverage.

Overview

High-Performance 5G Connectivity

The GDW-BV0908 is a high-performance 5G communication antenna engineered for optimal signal reception and transmission. Designed to enhance coverage and improve data throughput, it is a robust solution for modern 5G networks. Its weather-resistant enclosure and versatile mounting options ensure reliable performance in diverse outdoor environments.

Technical Specifications

Connectivity Components

- Low-loss coaxial cable
- Gold-plated connector

Network Compatibility

5G

Physical Characteristics

Enclosure Design

Weather-resistant • Robust

Installation Options

- Pole mount
- Wall mount
