

5kW Gasoline Generator for Telecommunications

This 5kW gasoline generator is designed to provide reliable power for telecommunications applications. It features durable construction, an efficient engine, and user-friendly controls for easy operation and maintenance.

Overview

Professional Telecommunications Power Solution

This gasoline-powered generator is specifically engineered to provide stable, reliable backup power for critical telecommunications infrastructure. Featuring an air-cooled 4-stroke OHV engine, it delivers a 5kW start-up power capacity with a 4kW continuous output, ensuring consistent performance for sensitive electronic equipment. The unit is built for durability and ease of use, incorporating advanced safety isolation, a reinforced frame, and enhanced cooling systems to handle demanding operational environments.

Key Performance Metrics

Performance Metrics

| | | | |
|-------------------------------|-----------------------------|-----------------------------|--------------------------------|
| 5 kW Start-up Power | 4 kW Rated Output | 10 h Running Time | 76 dB(A) Noise Level |
|-------------------------------|-----------------------------|-----------------------------|--------------------------------|

Technical Specifications

Detailed technical specifications and core technology features of the generator unit.

Engine Specifications

| Attribute | Value |
|--------------------|--------------------------------|
| Engine Type | Single cylinder, 4 stroke, OHV |
| Displacement | 389cc |
| Cooling System | Air-cooled |
| Starting Mechanism | Recoil / Electric start |
| Fuel Tank Capacity | 25L |

Electrical Parameters

- Rated Frequency: 50/60 Hz
- Rated Voltage Options: 110/120/220/230V
- Power Factor: 1.0
- Generator Type: Power Frequency Synchronous

Key Features

Core Technology & Benefits

Safety Electrical Isolation, Reinforced Frame, Maintenance-free Battery, 9.5-inch PVC Wheels, Protective Muffler Guards
