

60-Second Recordable Sound Module

This recordable sound module can store up to 60 seconds of audio. It features a microphone, speaker, battery compartment, and record/playback buttons for easy integration.

Overview

Versatile 60-Second Recordable Audio Module

This recordable sound module offers a flexible solution for adding custom audio to a wide range of promotional items and consumer products. With a 60-second recording capacity, it allows for high-quality voice messages or sound effects to be integrated into greeting cards, postcards, and toys. The module features a customizable PCB design and comes equipped with an integrated battery box for immediate use.
