

# 600 MW Power Plant Machine

This is a power plant machine with a capacity of 600MW. It is designed for large-scale electricity generation.

## Overview

### High-Capacity Power Generation Solution

This 600 MW power plant installation consists of two 300 MW units, designed for robust, large-scale energy production. Both units have successfully completed rigorous 168-hour trial operations, demonstrating reliability and operational readiness. The system is engineered for full-capacity performance with excellent economic indicators, making it a proven infrastructure solution for industrial power needs.

## Technical Specifications

Total Installed Capacity	600 MW
Unit Configuration	2 x 300 MW

## Operational Milestones

### Trial Operation Status

168 Hours Completed • Full Capacity Verified

### Deployment Timeline

Unit	Completion Date
Unit 3	July 10, 2006
Unit 4	December 19, 2006
