

-60°C Ultra-Low Temperature Freezer for Sample Storage

This ultra-low temperature freezer is designed for the reliable storage of biological samples and reagents. It maintains a consistent internal temperature of -60°C to ensure the integrity of stored materials.

Product Overview

Reliable Ultra-Low Temperature Storage

This ultra-low temperature freezer is engineered for the secure and stable storage of sensitive biological samples, reagents, and research materials. Operating at a consistent -60°C, it ensures long-term sample integrity through a robust refrigeration system and highly efficient insulation. It is an ideal solution for laboratories, research facilities, and clinical environments requiring dependable cold-chain preservation.

Key Performance Metrics

Operating Temperature

-60 °C
Temperature

Ideal Applications

Laboratory, Research, Clinical, Sample Storage

Technical Features

System Capabilities

- Stable -60°C internal environment
- Robust refrigeration system
- Efficient thermal insulation
- User-friendly control interface
