

6.5 HP Gasoline Engine

This single-cylinder, 4-stroke gasoline engine is air-cooled. It features a recoil starter, an overhead valve (OHV) configuration, and a cast iron cylinder sleeve.

Product Overview

High-Efficiency Power Solution

This 6.5 HP single-cylinder, 4-stroke gasoline engine is engineered for versatility and reliability in demanding work environments. Featuring an overhead valve (OHV) design, it delivers improved fuel efficiency and optimal power output for professional power equipment. With a durable cast iron cylinder sleeve, this unit provides the longevity required for consistent performance in generators, water pumps, and tillers.

Technical Performance

Maximum Power Output

6.5 HP Rated Horsepower	196 cc Displacement
-----------------------------------	-------------------------------

Configuration	Single-cylinder, 4-stroke, Air-cooled, OHV
---------------	--

Operational Capacities

Fuel Tank Capacity	3.6 L
Oil Capacity	0.6 L

Design Features

Key Components

- Cast iron cylinder sleeve
- Overhead Valve (OHV) design

Starting Mechanism	Recoil starter
--------------------	----------------

Applications

Recommended Uses

Generators • Water Pumps • Tillers • General Power Equipment
