

6.5kW On-Grid Solar Power System for Home Use

This on-grid solar system delivers 6.5kW of power for residential applications. It features a solar panel, inverter, mounting hardware, and necessary electrical components for grid connection.

System Overview

6.5kW On-Grid Solar Solution

This 6.5kW on-grid solar power system is engineered specifically for residential applications, offering a reliable way to harness solar energy. By converting sunlight directly into usable electricity, it integrates seamlessly with your home's existing grid connection. This system is an ideal choice for homeowners looking to significantly reduce electricity bills while actively contributing to sustainable energy consumption.

Rated Power Output

6.5 kW

System Capacity

System Type

On-Grid • Grid-Tied

Technical Details

Included Components

- Solar Power Panels
- Grid-Tie Inverter
- Mounting Hardware
- Electrical Components

Primary Application

Residential / Home Use
