

6L Oxygen-Free Copper Heat Exchanger

This oxygen-free copper heat exchanger has a 6-liter capacity. It features a multi-layered design with horizontally arranged copper tubes for efficient heat transfer.

Product Overview

High-Efficiency Thermal Management

This 6-liter heat exchanger is engineered from 99.9% oxygen-free copper, ensuring superior thermal conductivity for demanding heating applications. Its multi-layered design, featuring horizontally arranged copper tubes, maximizes heat transfer efficiency while maintaining a compact form factor. Built for durability and performance, this unit provides a reliable solution for professional thermal management systems.

Technical Specifications

Capacity	6 L
Product Weight	1.2 KGS

Material & Construction

Material Purity	99.9% Oxygen-free Copper
Key Features	High Efficiency, Hard Oxidation, Excellent Thermal Conductivity, Super Durability
