

6SP30 Submersible Deep Well Pump

The 6SP30 deep well pump is a submersible multistage pump designed for efficient water extraction from boreholes and deep wells. Constructed from stainless steel, it offers corrosion resistance and durability in demanding environments.

Overview

High-Efficiency Submersible Pumping

The 6SP30 is a robust, multistage submersible pump engineered specifically for reliable water extraction from deep wells and boreholes. Constructed from high-grade stainless steel, this unit provides exceptional corrosion resistance and durability for long-term operation in demanding environments. Designed for versatility, it is an ideal solution for irrigation, municipal water supply, and pressure boosting applications.

Technical Specifications

Construction Material	Stainless Steel
Key Features	Corrosion Resistant, Quiet Operation, Built-in Check Valve, Multistage Design

Performance

Performance Overview

30 m³/h

Flow Rate

6 inches

Minimum Well Diameter

Applications

Suitable Applications

- Agricultural Irrigation
- Water Supply Systems
- Pressure Boosting
- Deep Well Extraction
