

7-Inch Abrasive Cutting Disc for Hard Metals

This cutting disc is made with semi-precious corundum and high-quality zirconia aluminium oxide grains. Its medium-hard bond provides maximum grinding performance on high-grade steel and other hard materials.

Product Overview

High-performance cutting disc engineered for precision and durability on hard metal surfaces.

Professional Abrasive Cutting Disc

This 7-inch abrasive cutting disc is engineered for superior performance on high-grade steel and other high-hardness materials. Constructed with high-quality zirconia aluminium oxide grains and a medium-hard bond, it provides an efficient, easy-cut experience for demanding industrial tasks. Designed for professional metalworking, this disc offers an exceptional balance between durability and cost-effectiveness.

Technical Specifications

Maximum Rotational Speed

8500 RPM
Max RPM

| | |
|---------------------------|--|
| Dimensions | 180 x 3 x 22.2 mm (7 x 1/8 x 7/8 inches) |
| Maximum Linear Speed | 80 m/s |
| Recommended Machine Power | Greater than 3kW |

Material & Composition

| | |
|-------------------|---|
| Abrasive Material | Zirconia aluminium oxide grains with semi-precious corundum |
| Bond Hardness | Medium |

Compliance & Standards

| | |
|----------------------------|--|
| Certifications & Standards | EN 12413, BGV D12, ISO 9001, MPA Z-04890 |
|----------------------------|--|

Usage

Suitable Materials

High-grade Steel • Stainless Steel • Hard Materials
