

7.2V NiMH Battery Pack

This is a high-capacity 7.2V battery pack consisting of six sub-C sized NiMH cells, each with a capacity of 3300mAh. It is designed for high-drain applications requiring a reliable and long-lasting power source.

Overview

High-Capacity Power Solution

This 7.2V NiMH battery pack is engineered for high-drain applications, providing consistent and reliable power. Comprised of six sub-C sized cells, it offers a robust capacity of 3300mAh, making it an excellent choice for demanding electronic devices. Its standard connector design ensures seamless integration and ease of use across various compatible platforms.

Technical Specifications

Capacity

3300 mAh

Capacity

Nominal Voltage	7.2 V
Chemistry	NiMH (Nickel-Metal Hydride)
Cell Size	Sub-C
Number of Cells	6

Applications

Recommended Uses	RC Cars, Model Airplanes, Electronic Gadgets, High-Drain Devices
------------------	--

Features

Key Features

- High-capacity 3300mAh design
- Standard connector for easy integration
- Designed for high-drain applications
- Durable construction
