

# 75 Ohm Coaxial Cable

This 75 Ohm series coaxial cable is designed for reliable signal transmission. It features a copper conductor, polyethylene dielectric, and durable PVC jacket, making it suitable for CATV, satellite, and broadband systems.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Coaxial Connectivity

This 75 Ohm coaxial cable is engineered for reliable signal transmission across demanding CATV, satellite, and broadband communication environments. Constructed with high-quality materials including a copper conductor and durable PVC jacketing, it ensures excellent signal integrity and minimal attenuation. The advanced shielding design effectively protects against interference, making it an ideal choice for professional installations requiring consistent, long-term performance.

## Technical Construction

### Shielding Components

- Aluminum Foil Shield
- Tinned Copper Braid

Conductor Type	Copper / Copper-Clad Steel (CCS)
Dielectric Material	Foam Polyethylene
Jacket Material	PVC Compound

## Key Features

### Impedance

**75 Ohm**  
Impedance

### Performance Benefits

Low Attenuation • Superior Shielding • High Flexibility • Environmental Protection

### Suitable Applications

CATV, Satellite Systems, Broadband Communication, Video Transmission, Data Transmission
