

75-Ohm Low-Loss Coaxial Cable

This is a 75-ohm coaxial cable designed for communication applications. It features foamed insulation and is suitable for various signal transmission needs.

Product Overview

High-Performance Signal Transmission

This 75-ohm low-loss coaxial cable is engineered for demanding communication applications requiring reliable signal integrity. Featuring advanced foamed insulation, the design minimizes signal attenuation, making it an ideal choice for telecommunications, broadcasting, and high-speed data transmission networks. Its robust construction ensures optimal performance across diverse electronic systems.

Technical Specifications

Cable Category

Low-Loss • RF Coaxial

Impedance

75 Ohm

Insulation Material

Foamed

Primary Applications

Telecommunications, Broadcasting, Data Transmission
