

# 750x150x66 Rubber Track for Carriers

This rubber track measures 750mm in width, 150mm in pitch, and has 66 links. It is designed to provide optimal traction and durability for carrier equipment.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Carrier Rubber Track

This premium rubber track features a joint-less, multi-strand high-tensile wire design, engineered to minimize ground pressure and prevent surface damage. Built using state-of-the-art computer-controlled vulcanization, the track ensures optimal temperature, humidity, and cure time for maximum durability. Its specialized tread pattern provides superior traction and stability, making it an ideal solution for heavy-duty material handling and earthmoving operations.

### Key Features

Joint-less design, Multi-strand wire, Low ground pressure, Tear-resistant pattern, Computer-controlled vulcanization

## Maintenance Guide

### Care and Longevity

- Avoid sharp debris whenever possible
- Store tracks and equipment indoors when not in use
- Check tension after the first 40 hours of operation
- Perform wide, slow turns to prevent premature wear
- Inspect undercarriage rollers, idlers, and sprockets during replacement
