

7kg Washer and 3.5kg Dryer Combo with LCD

This all-in-one appliance combines washing and drying into a single unit. It features a 7kg wash capacity and a 3.5kg drying capacity, with an LCD display for easy operation.

Overview

Compact all-in-one design suitable for modern living spaces.

All-in-One Laundry Solution

This versatile washer and dryer combo offers a seamless laundry experience by combining washing and drying capabilities in a single, space-saving unit. Designed for modern households, it features advanced BLDC motor technology for quiet, stable operation and deep steam cleaning to effectively remove stubborn stains. With intelligent controls, energy-efficient performance, and a comprehensive suite of wash programs, it ensures both convenience and superior fabric care.

Capacity

7 kg

Washing

3.5 kg

Drying

Key Features

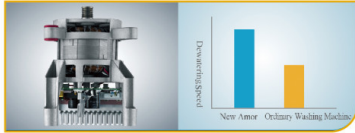

Laundry Programs & Functions

- Pre-wash
- Extra Rinse
- Drum Clean
- Wool Cycle
- Add Garment
- Delay Start
- iAdd Technology

Safety & Control Features

Self Diagnose, Fault Check, Overheating Control, Auto Balance, Child Lock, Foam Reducer, Touch Buttons

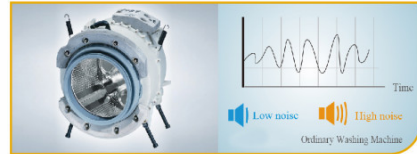

Motor & Performance

Wash clothing accurately and provide you with all-round and considerate care.

Set different washing & dewatering speed according to different fabrics, which gets rid of conventional motor's disadvantages resulting from fixed washing & dewatering speed. As a result, the washed clothing is clean and free from damage.

Variable washing and dewatering speeds ensure gentle care for different fabric types.

Run stably and silently, making you solely enjoy the comfortable life.

Adopt the VF motor without carbon brush, which features lower-noise effect.

VF motor technology provides stable, quiet operation compared to conventional motors.

Motor Technology

BLDC (Brushless DC) / VF Motor

Reliability (MTBF)

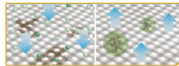

5000 hours

Advanced Technology

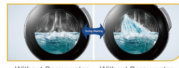

Deep steam removes stains in an all-round manner, and makes the clothing become cleaner

Spray the steam and detergent evenly onto the clothing surface. Subsequently, the steam factor will go deep into the clothing fabrics to dissolve stains from inside to outside. That will help remove stains like oil stains and sweat stains easily.

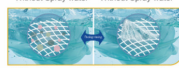

Surrounding Steam provides further washing and health

After seeping into the clothing, high-temperature steam will activate the detergent, so as to remove stubborn stains on the clothing fabrics more efficiently, and take care of the clothing more healthily. It is especially tailored to washing of underwear and children's wear.

Surrounding Steam provides further washing and health

During the washing process, spray water will flush the clothing forcefully to accelerate the dissolution of detergent. Along with clockwise and anticlockwise rotation of the drum, clean degree of washing and washing evenness degree will be effectively raised.

Spray rinsing for reduction of residues

During the rinsing process, sprayed water will be sprayed onto the clothing in a wide range, and then it will seep into clothing fabrics and carry away the detergent residues, so as to rinse the clothing more thoroughly, and avoid detergent residues' harm to the clothing and your families' health.

Deep steam technology penetrates fabrics to dissolve stains, while spray rinsing ensures thorough detergent removal.

Cleaning Technology

Deep Steam • Spray Rinsing • Variable Speed Control
