

8.0 HP Single-Cylinder Gasoline Engine

This robust and reliable single-cylinder, air-cooled gasoline engine is designed for a variety of applications. It delivers consistent power and performance with its 8.0 horsepower output, high-capacity fuel tank, and easy-start system.

Overview

High-Performance Engine

This robust single-cylinder, air-cooled gasoline engine is engineered for consistent power and durability across various industrial applications. It features an efficient combustion system and an easy-start mechanism, ensuring reliable performance when you need it most. Its compact and lightweight architecture allows for seamless integration into portable equipment such as generators, water pumps, and tillers.
