

80L Internal Rubber Mixer

This 80L internal mixer is designed for rubber processing. It features a robust construction with a complex system of hydraulic cylinders and control mechanisms for efficient mixing and material handling.

Product Overview

High-Efficiency Rubber Processing

This 80L internal rubber mixer, commonly referred to as a Banbury mixer, is engineered for robust industrial rubber processing. Featuring a durable vertical configuration, the machine integrates advanced hydraulic cylinders, precise control mechanisms, and high-performance rotors within a specialized mixing chamber. Designed for high-volume operations, it ensures consistent material handling and efficient mixing cycles to meet demanding production standards.

Technical Specifications

Mixing Chamber Capacity	80 L
Mixer Type	Internal Mixer (Banbury)
Configuration	Vertical

Key Features

Core Components

- Mixing Chamber
- High-Performance Rotors
- Hydraulic Cylinder System
- Discharge Mechanism

Application Focus	Rubber Processing, High-Volume Production, Industrial Mixing
