

8mm Component Feeder for SMT Placement Machines

Precision component feeder designed for surface mount technology (SMT) placement machines. This 8mm feeder ensures accurate and reliable delivery of electronic components during the automated assembly process.

Overview

Precision 8mm Component Feeder

This 8mm component feeder is engineered specifically for high-speed automated assembly processes in surface mount technology placement machines. Designed for reliability and consistent performance, it ensures the accurate delivery of electronic components in demanding production environments. The unit features adjustable feed settings and is built with high-quality materials to facilitate easy maintenance and long-term durability.

Technical Specifications

Feeder Width	8 mm
Compatible Media	Standard 8mm component tape

Features

Key Features

- Adjustable feed settings
- Easy maintenance access
- High-quality construction
- Designed for automated assembly
