

90-Degree Conduit Elbow Connector

This 90-degree stamping elbow connector is designed for connecting conduits or pipes at a right angle. It features a robust metallic construction with threaded ends for secure attachment and is suitable for various industrial and electrical applications requiring durable and reliable connections.

Product Overview

Industrial Grade Elbow Connector

This 90-degree conduit elbow connector is precision-engineered for seamless right-angle transitions in electrical and industrial piping systems. Constructed from robust metal, it ensures high durability and structural integrity in demanding environments. The threaded end design allows for quick, secure attachment, making it an essential component for reliable conduit installation.

Technical Specifications

Application Compatibility

- Electrical conduit systems
- Industrial piping
- Rigid conduit routing

Bend Angle	90 degrees
Material Composition	Metallic
Attachment Method	Threaded ends
