9000m Deep Well Drilling Rig

This is a high-capacity drilling rig designed for deep well drilling operations up to 9000 meters. It is engineered for robust performance and reliability in demanding drilling environments and is suitable for oil and gas exploration and production.

Overview

High-Capacity Deep Well Drilling Rig

This high-capacity drilling rig is engineered specifically for deep well drilling operations reaching depths of up to 9000 meters. Designed for reliability in demanding environments, it incorporates heavy-duty hoisting equipment and advanced control systems to ensure operational efficiency. Its modular design facilitates easier transport and assembly, making it a suitable solution for large-scale oil and gas exploration and production projects.

Technical Capabilities

Maximum Drilling Depth

9000 m
Max Depth

Primary Applications	Oil Exploration, Gas Exploration, Deep Well Drilling

Design and Construction

Key Design Features

- Modular design for transport and assembly
- Heavy-duty hoisting equipment
- Advanced control systems
