

AAA NiCd Rechargeable Battery

AAA size rechargeable battery utilizing Nickel-Cadmium (Ni-Cd) chemistry. It features a nominal voltage of 1.2V and is suitable for various low-drain electronic devices and applications requiring rechargeable power sources.

Product Overview

High-Reliability AAA Rechargeable Power

These AAA NiCd rechargeable batteries are designed for consistent performance across a variety of demanding applications. With a robust design that supports over 1000 charge/discharge cycles, they offer a reliable 5-year standby power solution. Engineered for excellence, these cells maintain stability even under overcharge conditions and feature low self-discharge characteristics for long-term storage readiness.

Technical Specifications

Capacity Options

- 1200
- 1400

Chemistry	Nickel-Cadmium (Ni-Cd)
------------------	------------------------

Size Format	AAA
--------------------	-----

Nominal Voltage	1.2 V
------------------------	-------

Performance Metrics

Cycle Life

1000 cycles
Charge Cycles

5 years
Standby Life

Self-Discharge Rate	Approx. 79% capacity remaining after 1 month storage at 20±5°C
----------------------------	--

Overcharge Performance	Continuous 0.1C rate for 48 hours without leakage or deformation
-------------------------------	--

Applications

Typical Applications

Telecommunications, Audio Devices, Video Devices, Lighting, Remote Control Toys, Power Tools
