

Abrasive Cutting Disc for Metalworking

This abrasive cutting disc is designed for high-speed cutting applications in metalworking. It features a reinforced construction for enhanced durability and safety.

Product Overview

High-Performance Metalworking Disc

This abrasive cutting disc is engineered for high-speed cutting applications across a variety of ferrous metals, including steel and stainless steel. Featuring a reinforced construction, it is designed to provide both durability and enhanced operational safety. It is fully compatible with standard angle grinders, making it a reliable choice for professional metalworking tasks.

Technical Specifications

Safety Standard	EN 12413
Abrasive Grade	A 36-S

Application

Tool Compatibility	Angle Grinder
Compatible Materials	Steel, Stainless Steel, Ferrous Metals

Features

Construction Features

- Reinforced design for durability
- Engineered for high-speed applications
- Safety-compliant construction
