

Abrasive Emery Cloth Roll for Metalworking

Emery cloth is a flexible abrasive material used for sanding and polishing applications. It consists of abrasive grains bonded to a cloth backing and is used in metalworking, woodworking, and automotive industries.

Product Overview

Professional Abrasive Emery Cloth

This flexible abrasive emery cloth is an essential tool for high-performance metalworking and surface finishing. Engineered with a durable cloth backing, it excels at conforming to irregular or curved surfaces for tasks like deburring, rust removal, and paint preparation. Designed for both manual and power tool applications, this abrasive provides the versatility needed for professional industrial settings.

Technical Specifications

Suitable Industries

- Metalworking
- Woodworking
- Automotive

Core Applications

- Deburring
- Rust removal
- Paint preparation
- Surface smoothing

Abrasive Composition

Aluminum Oxide, Silicon Carbide

Performance Features

Tool Compatibility

Hand Use • Sanding Blocks • Orbital Sanders

Key Benefits

- High flexibility for curved surfaces
- Durable cloth backing
- Wide range of grit sizes available
