

Abrasive Flap Disc

Abrasive flap discs are used for grinding, blending, and finishing applications. The overlapping abrasive flaps provide a cushioned grinding action, reducing the risk of gouging or damaging the workpiece.

Product Overview

High-Performance Abrasive Flap Disc

This abrasive flap disc is engineered for professional grinding, blending, and finishing applications across metal, wood, and plastic surfaces. Featuring overlapping abrasive flaps, the design continuously exposes fresh abrasive material, ensuring consistent performance and extended tool life. It offers a smooth, controlled cutting action with minimal vibration and noise, making it an ideal choice for weld blending, deburring, and rust removal.

Technical Details

Compatible Materials

- Metal
- Wood
- Plastic

Key Features

Overlapping Flaps • Cushioned Grinding • Consistent Finish • Extended Life

Primary Applications

Weld Blending, Deburring, Rust Removal, Surface Preparation, Grinding, Finishing

Operational Specs

Compatible Tools

Angle Grinders
