

Abrasive Flap Disc Wheel for Grinding and Finishing

Abrasive flap discs consist of overlapping abrasive flaps attached to a backing plate. These are used for grinding, blending, and finishing on materials like metal, wood, and plastic.

Product Overview

High-Performance Abrasive Flap Discs

These abrasive flap discs are engineered for efficient grinding, blending, and finishing tasks across a variety of materials including metal, wood, and plastic. Designed with overlapping abrasive flaps on a durable backing plate, they deliver a consistent finish and extended service life. They are an essential tool for professional applications such as deburring, weld removal, surface preparation, and stock removal.

Technical Specifications

Primary Applications

- Grinding
- Blending
- Finishing
- Deburring
- Weld Removal
- Surface Preparation
- Stock Removal

Compatible Materials

Metal • Wood • Plastic

Abrasive Materials

Aluminum Oxide, Zirconia Alumina, Ceramic
