

Abrasive Flap Discs

Abrasive flap discs are designed for grinding, blending, and finishing on a variety of materials. They consist of overlapping abrasive flaps bonded to a backing plate, providing a cushioned grinding action and extended life.

Product Overview

High-Performance Abrasive Flap Discs

These professional-grade abrasive flap discs are engineered for versatile grinding, blending, and finishing applications across a wide range of materials. Featuring overlapping abrasive flaps securely bonded to a durable backing plate, they deliver a cushioned grinding action that ensures consistent results and extended tool life. They are an ideal solution for demanding tasks such as weld removal, deburring, and comprehensive surface preparation.

Technical Specifications

Design Features

- Overlapping abrasive flaps
- Durable backing plate
- Cushioned grinding action
- Extended operational life

Primary Applications

Weld Removal, Deburring, Surface Preparation, Blending, Finishing
