

# Abrasive Flap Wheel

Abrasive flap wheels are used for grinding, blending, and finishing various materials. The wheels consist of overlapping abrasive flaps bonded to a central core and can be used on metal, wood, and plastic.

## ADDITIONAL IMAGES

## Product Overview

### Mounted Abrasive Flap Wheels

Mounted flap wheels feature abrasive lamellas arranged radially around a central shaft, designed to contour effectively to workpieces as they wear. These tools are ideal for finishing, cleaning, deburring, and polishing operations on stainless steel, ferrous and non-ferrous metals, wood, and plastic. Compact in design with diameters of 3 inches or less, they are optimized for use with portable power tools.

## Key Features

<b>Compatible Materials</b>	Stainless Steel, Ferrous Metals, Non-Ferrous Metals, Wood, Plastic
<b>Primary Applications</b>	Finishing, Cleaning, Deburring, Polishing
