

Abrasive Polishing Wheel for Power Tools

This abrasive polishing wheel is designed for use with electric tools. It is constructed from durable materials for effective polishing and surface finishing.

Product Overview

Professional Polishing Performance

This abrasive polishing wheel is engineered for flexibility, making it an ideal solution for complex surface environments. It is particularly effective for finishing furniture, glass, and intricate edges such as duck mouth, wave, and arc profiles. Designed as a reliable choice for initial and secondary polishing stages following fine grinding, it ensures consistent results for professional applications.

Technical Details

Suitable Applications

- Furniture polishing
- Glass edge finishing
- Duck mouth edge processing
- Wave edge processing
- Arc edge processing

Model Type	BK60
Usage Sequence	First stage polishing, Second stage polishing

Compatibility

Tool Compatibility	Compatible with standard electric power tools
Mounting	Central mounting hole
