

Abrasive Sanding Material JA311

Abrasive sanding material JA311 is designed for various applications. It is suitable for use on materials like metal, wood, and others, with options for wet or dry use.

Product Overview

JA311 Abrasive Sanding Material

The JA311 is a versatile abrasive sanding material designed for a wide range of industrial and manual grinding applications. It supports multiple grain types and backing materials, making it adaptable for various surfaces including metal, wood, glass, plaster, and leather. With a standard width of 1420mm and a comprehensive grit range, it provides a flexible solution for both machinery and manual operation needs.

Technical Specifications

Available Grain Types	Aluminum Oxide, Silicon Carbide, Zirconia Aluminum, Calcined A/O
Backing Materials	Cotton Cloth, Blending Cloth, Polyester, Paper Backing
Standard Width	1420 mm
Grit Range	P60 - P1000 (Customizable on request)

Application & Usage

Compatible Materials

- Metal (Ferrous & Hard)
- Wood (General & Hard)
- Glass
- Plaster
- Leather
- Textile

Operation Modes

Machinery Use • Manual Operation

Environment Compatibility

Wet • Dry
